Classic 20K Prefilled Pod Kit and Pods: Why Vapers Love It

If you have been looking at the Classic 20K and wondering what exactly you are getting, and how it all works together, this guide covers everything. The kit, the replacement pods, the flavours, the battery, how to keep it going. All in one place.

The Classic 20K is a Tidal Vape exclusive. You will not find it anywhere else. It is built around the prefilled pod format, which means no e-liquid to measure, no coils to swap, and no settings to fiddle with. Pick it up, use it, replace the pod when it runs out.

What Is a Prefilled Pod Kit?

The prefilled pod format sits between a disposable vape and a traditional refillable kit. Like a disposable, the e-liquid is already inside the pod when you get it. Like a proper kit, the device itself is rechargeable and built to last.

With a disposable, you throw the whole thing away when it runs out. With a prefilled pod kit, you just replace the pod and keep the device. It is a cleaner, less wasteful way to vape, and over time it works out cheaper too.

The Classic 20K takes that concept and pushes the puff count further than most. Up to 20,000 puffs from a single device with the included pod and refill cartridges. That is a long way from the 600-puff disposables the market started with.

Classic 20K Prefilled Pod Kit

The kit is the device itself. It costs £9.99 and is available exclusively through Tidal Vape, either online or in store.

Out of the box you get the device, a 2ml prefilled pod already installed, and ten refill cartridges. That is your starting setup. The device handles everything else.

What the kit includes

- 2ml prefilled pod, installed and ready
- 10 refill cartridges included in the box
- 1000mAh battery
- Type-C fast charging
- Up to 20,000 puffs from the full setup
- 20mg nicotine salt formulation
- Compatible with Classic 20K replacement pods

The battery

A 1000mAh battery is solid for a device this size. You are not going to be reaching for the charger constantly. Type-C charging means a standard cable works the same one you are likely already using for your phone. No proprietary connectors, no hunting for a specific lead.

The flavour range

There are over 20 flavours available across the kit and replacement pods. The range covers most of what vapers actually want:

- Fruit and ice: Watermelon Ice, Strawberry Ice, Pineapple Ice, Blueberry, Mango Peach Pineapple, Triple Mango
- Sour and citrus: Sour Blueberry Raspberry, Blue Razz Lemonade, Lemon & Lime, Orange Tangerine Lemonade, Pink Lemonade, Cherry Sour Raspberry
- Mint and menthol: Menthol, Fresh Mint, Miami Mint, Mad Blue
- Other: Double Apple, Grape Raspberry, Cola Slushie, Summer Fruits, Juicy Peach, Black Mamba, Cherry Ice, Banana Ice

Not every flavour is always in stock. The range shifts. If your first choice is unavailable, the fruit-and-ice options tend to have the broadest and most consistent availability.

Who is the kit for?

The honest answer: nearly anyone. It is deliberately simple to use, which makes it a strong choice for people switching from cigarettes or disposables. At the same time, experienced vapers who want a low-maintenance setup will get on well with it too.

- Switching from cigarettes: the 20mg nicotine salt delivers a smooth, fast-absorbing hit similar to what cigarettes provide
- Coming off disposables: same convenience, but you keep the device and just swap pods
- Anyone who wants simplicity: no settings, no maintenance, no learning curve

Classic 20K Prefilled Pods

The replacement pods are sold separately at £6.99. They are designed specifically for the Classic 20K kit and will not work with other devices.

Each pod contains 20mg nicotine salt e-liquid. Nic salts are smoother than freebase nicotine at equivalent strengths, and they absorb faster. The result is a more satisfying hit without the harshness that higher-strength freebase liquid can produce.

- **When to replace a pod**
  You will know when a pod needs replacing. The vapour production drops, the flavour goes flat or tastes burnt, or you start getting dry hits. At that point, pull the old pod out and click a new one in.

  The kit comes with ten refill cartridges included, so you have a good supply from the

start. When those run out, replacement pods are available directly from Tidal Vape.

- **The nicotine salt formulation**
  Nicotine salts are worth understanding if you are new to them. Standard e-liquid uses freebase nicotine, which is fine at lower strengths but can be harsh at 20mg. Nicotine salts use a slightly different chemical form that delivers the same nicotine hit more smoothly and quickly.

  For anyone switching from cigarettes, this matters. The speed and smoothness of nicotine salt delivery is much closer to what a cigarette provides. That makes it easier to satisfy cravings without needing to vape as frequently.

- **Compatibility**
  The Classic 20K pods only work with the Classic 20K kit. This is not a limitation so much as a quality control decision. Using pods designed for the device means consistent wicking, the right resistance and reliable flavour from start to finish. Universal pods often do not perform as well because the tolerances are not matched.

The Kit and the Pods: How They Work Together

Think of the Classic 20K kit and its replacement pods as a single system rather than two separate products. The kit is the hardware. The pods are the consumable. Neither is much use without the other.

The starter kit gives you everything for the first run. Ten refill cartridges plus the preinstalled 2ml pod gets you well into the device before you need to think about restocking. After that, it is straightforward: when pods run low, order more. The device carries on.

Cost over time

Compared to buying disposables regularly, this setup is noticeably cheaper. A disposable at similar puff counts and nicotine strength costs significantly more than the pod replacements for the Classic 20K. The device itself pays for itself quickly.

Compared to a refillable kit with e-liquids and coils, it is simpler and more predictable. No e-liquid to buy separately, no coils to replace at variable intervals. Just pods, on a schedule you can anticipate.

Getting Started with the Classic 20K

Setting up takes about thirty seconds. The pod is already installed when the kit arrives.

Charge the device fully before first use via the Type-C port
Once charged, draw on the mouthpiece to activate
There are no buttons and no settings to adjust
When the pod runs out, remove it and insert a replacement
Recharge the device whenever the battery runs low

That is the full routine. It does not get more complicated than this.

A note on the first few puffs

New pods sometimes produce a slightly muted flavour on the first few draws while the wick saturates properly. This is normal so give it a moment and it settles into full flavour quickly.

Where to Buy

The Classic 20K Prefilled Pod Kit and the replacement Classic 20K Prefilled Pods are exclusively available from Tidal Vape. You can order online with free delivery on orders over £24, or pick them up in store across Tidal Vape's 34-plus locations across the UK.

Orders placed before 1pm Monday to Friday are dispatched the same day.
